How to decarbonise your housing

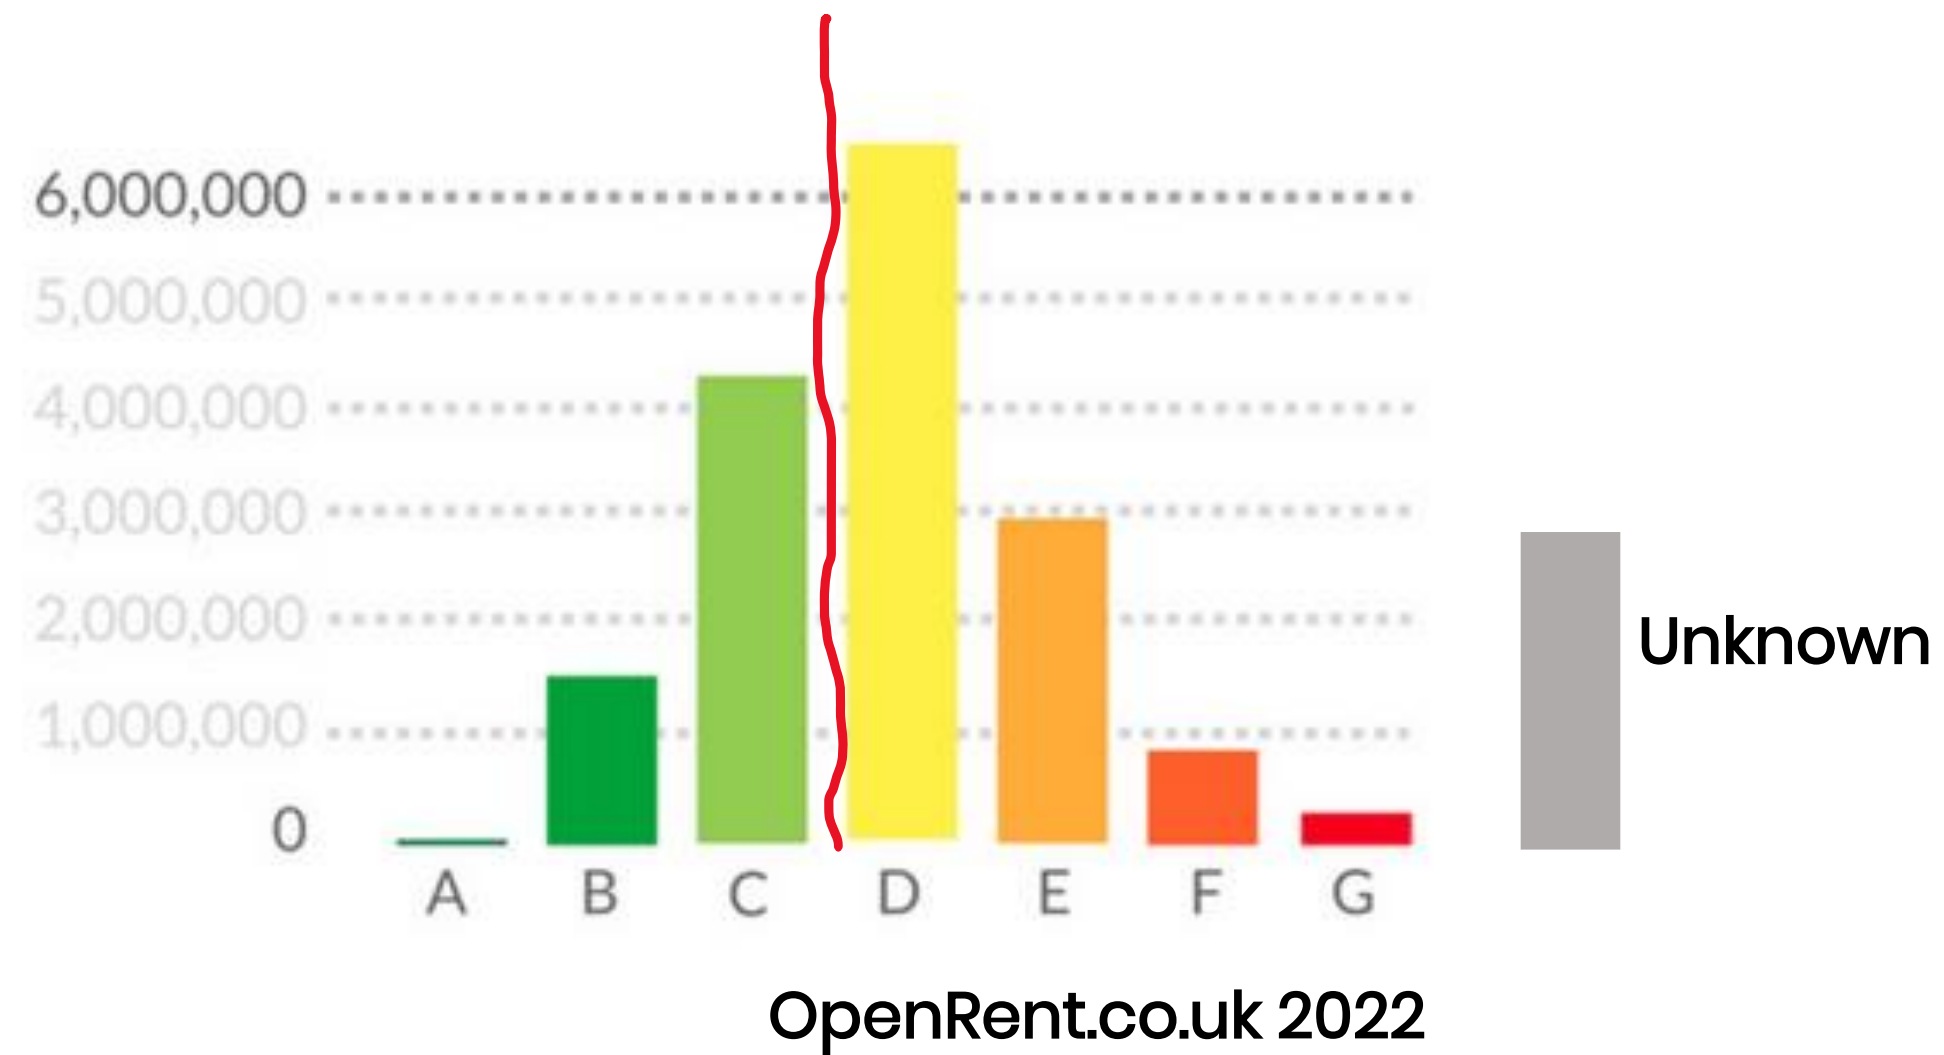

Planning for EPC C and the net zero carbon
transition

Energy Saving Trust

27.02.24

What's your average SAP rating?

All social homes to achieve:

- minimum EPC C by 2030
- NZC Performance by 2050

Developing a retrofit campaign – technical planning

What do we need to know about our stock?

What are the sweet spot opportunities?

Which homes do we tackle first?

How do we get the biggest bang for our buck?

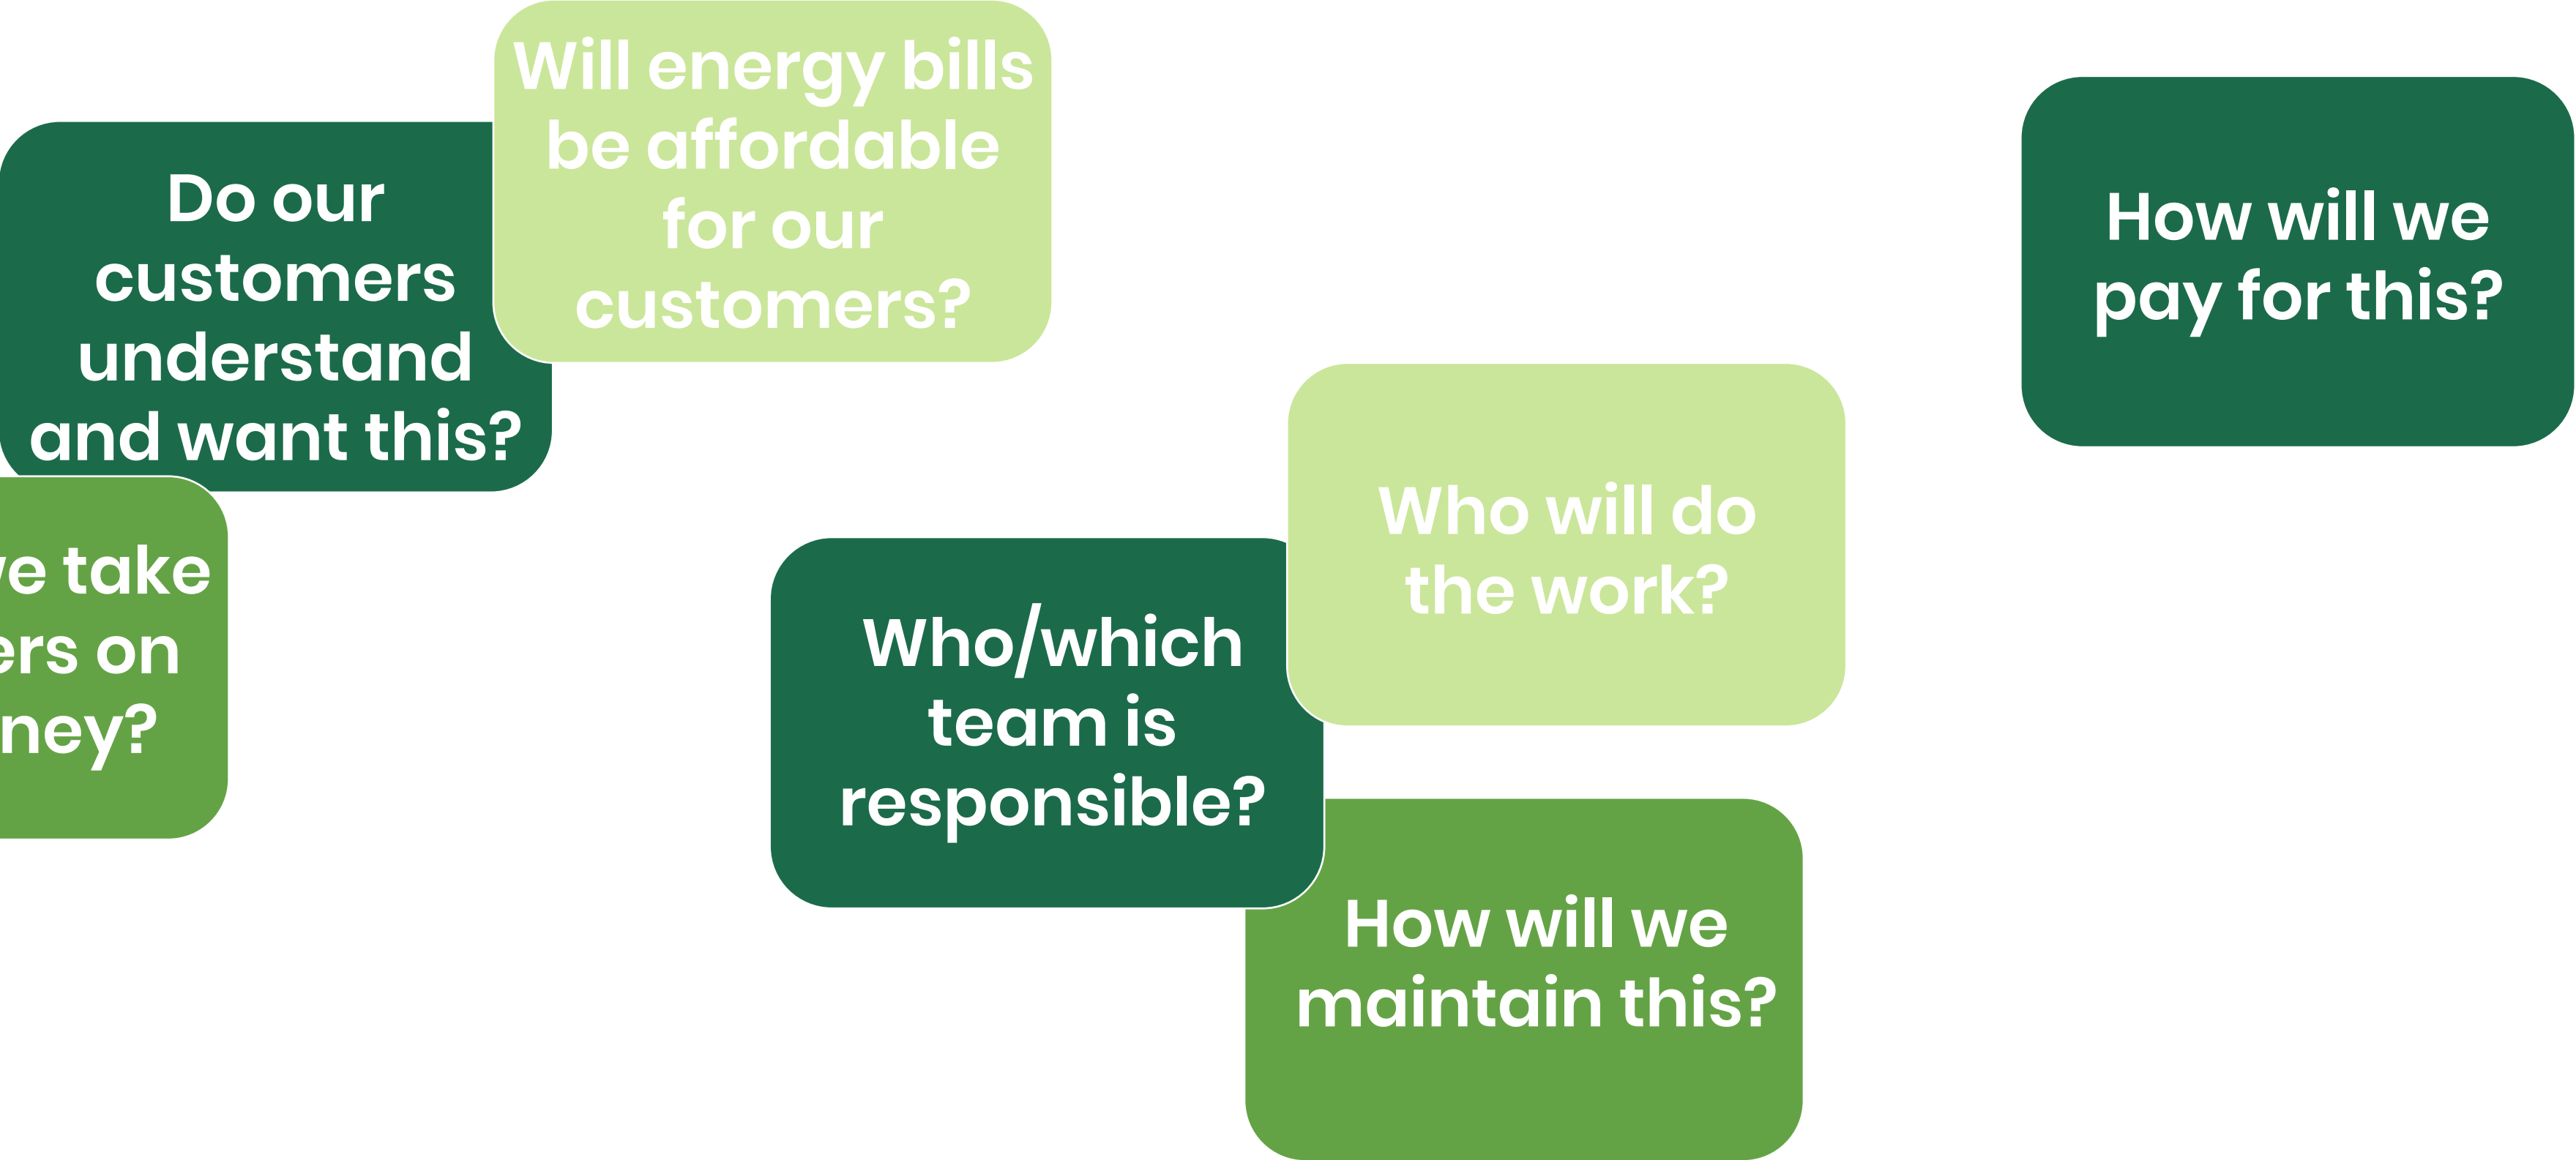

What retrofit do we need to do?

What technical solution do we back?

Piecemeal or area based?

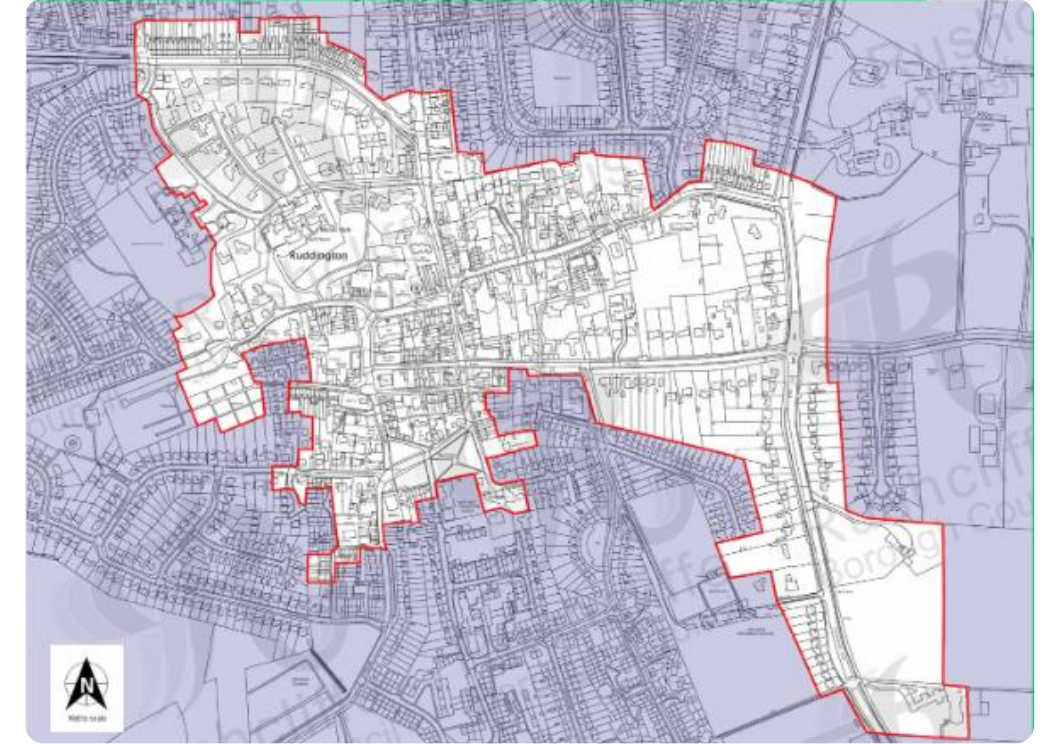

Stepwise or whole house?

Developing a retrofit campaign – people & resource

GOOD DATA & INSIGHT!

Data integration

Overcoming the data challenge

Our solutions

Build an evidence base

Home Analytics

- Address-level housing stock database that covers all homes in Great Britain

Explore scenarios

Portfolio Energy Assessment Tool (PEAT)

- Energy modelling tool that simulates retrofit scenarios for portfolios/areas of properties

Retrofit Modelling							
Retrofit Cost	Retrofit Cost / Home	Measures / Home	Avg Current SAP	Avg Potential SAP	Selected Homes	Selected Homes (%)	
£13.7bn	£34.3K	7.1	64	86	400.1K	100.0%	
Current CO2 (t/yr)	2030 CO2 (t/yr)	2050 CO2 (t/yr)	Annual kWh Savings	Annual Bill Savings	Avg kWh Savings	Avg Bill Savings

Case study

Case study

West Yorkshire Combined Authority

- Declared climate emergency in June 2019
- Net zero target: 2038
- Looking for:
 - Better housing stock data.
 - Pathways for achieving EPC C/net zero.
 - Estimated costs and savings.
 - Alternative funding models to finance decarbonisation.
 - A list of project areas that local councils could focus on in the next five years.

**West
Yorkshire
Combined
Authority**

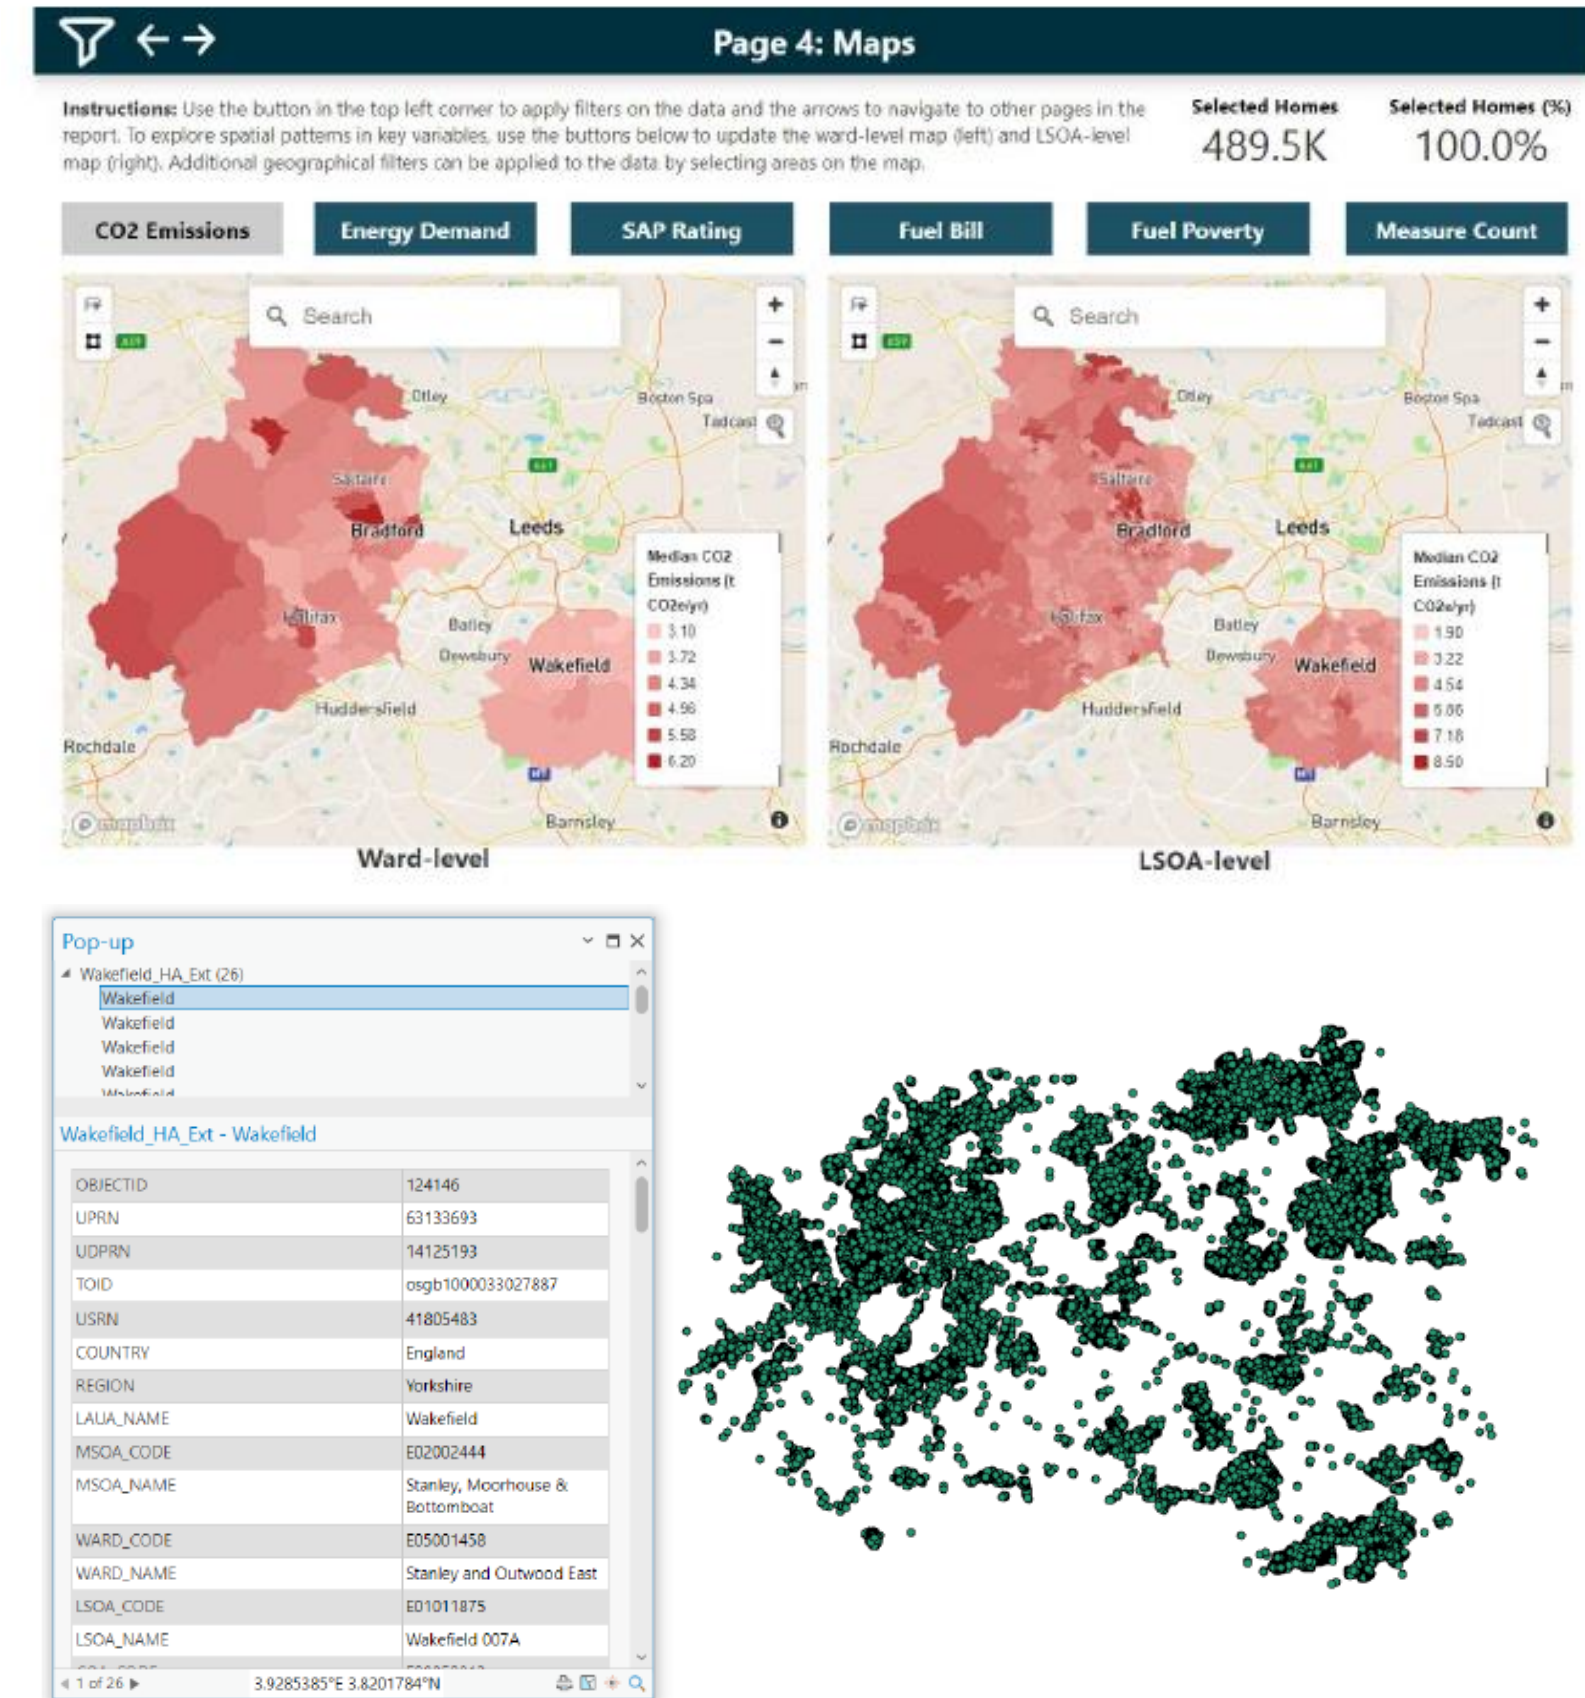

Stage 1

Build an evidence base

Data license

- 5-year data license for Home Analytics property database.
- Periodic updates to reflect new data.
- Provided in several formats:
 - CSV extracts
 - Geodatabases
 - Power BI dashboards

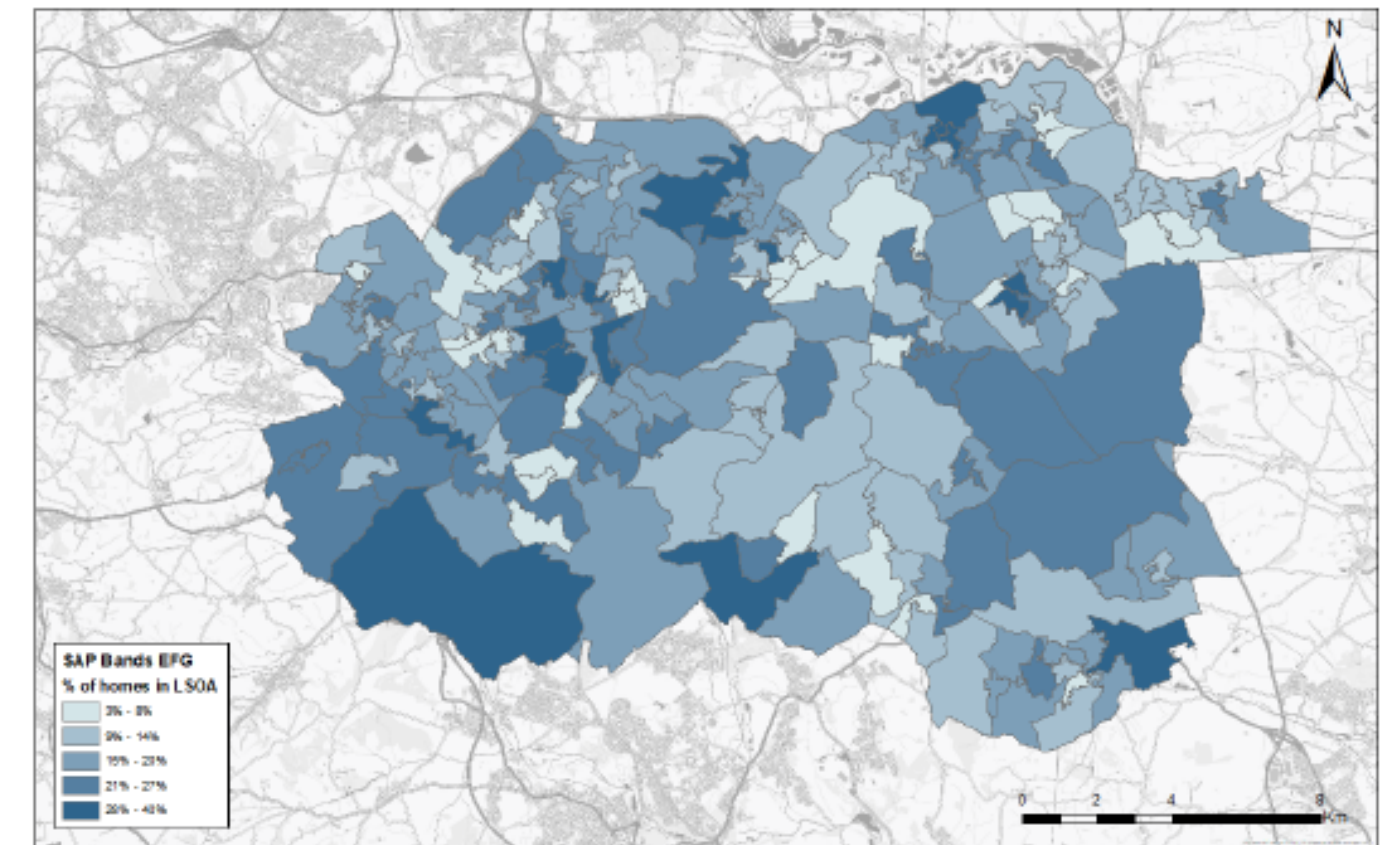

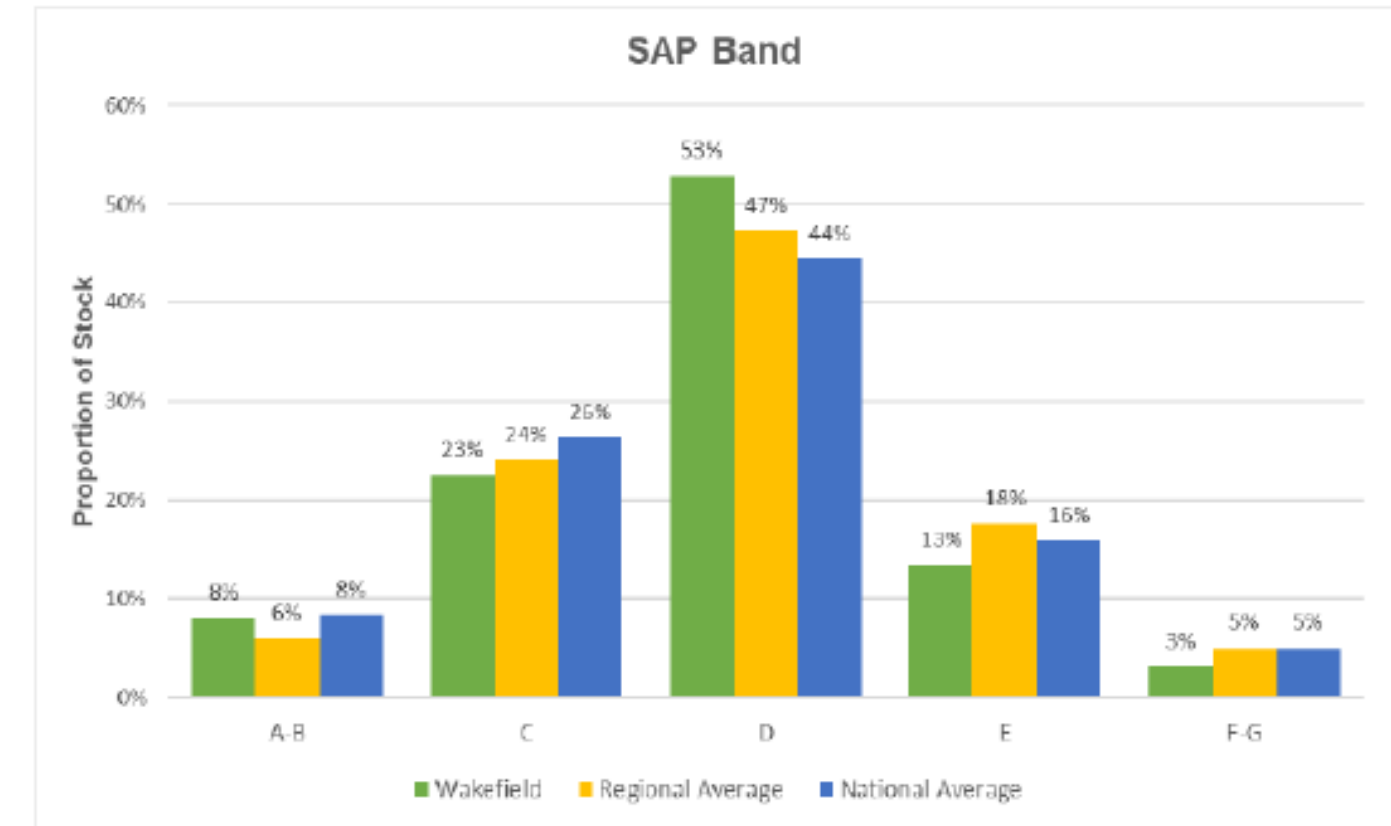

Stage 1

Build an evidence base

Stock overview report

- Analysis of housing stock data, including hot spot mapping.
- Regional and national benchmarking.
- Identification of retrofit challenges and opportunities.
- Delivered as slide deck for councils to disseminate with internal stakeholders.

Stage 2

Explore scenarios

Scenario scoping

- Scoped out relevant retrofit scenarios with WYCA steering group:
 1. EPC band C
 2. net zero
- Translated council objectives into scenario parameters.
- Used PEAT software to model scenarios for all 500k homes in West Yorkshire.

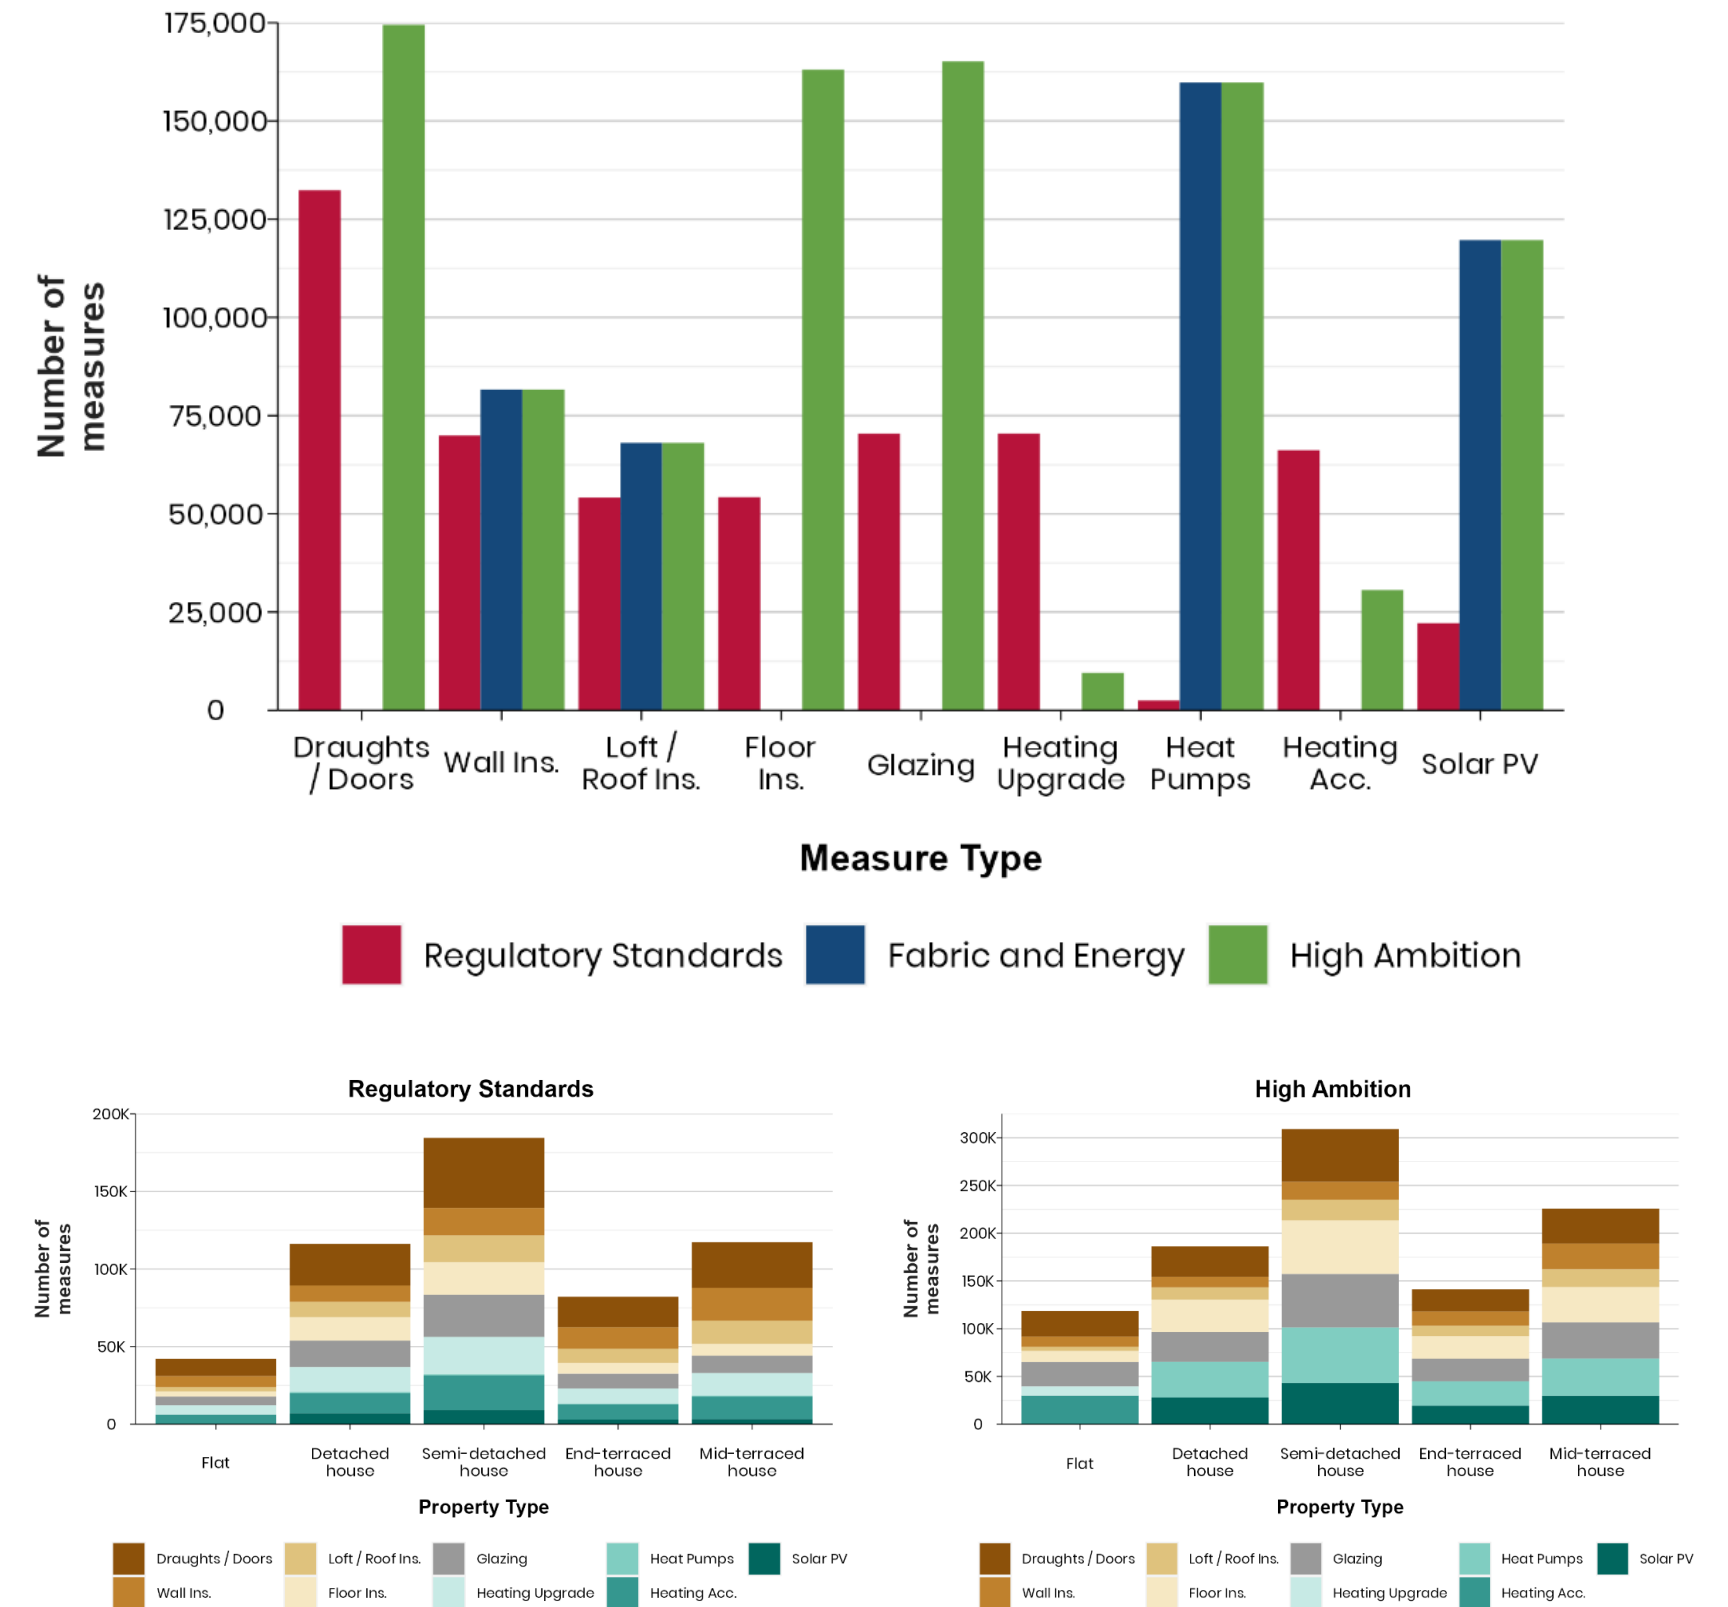

Stage 2

Explore scenarios

Scenario modelling

- Measure-level outputs:
 - costs and savings (kWh, £) per measure recommended
- Property-level outputs:
 - total costs and savings per package of measures
 - energy efficiency impact (EPC score)
- Integrated with housing stock data in Power BI dashboards for cross-referencing.

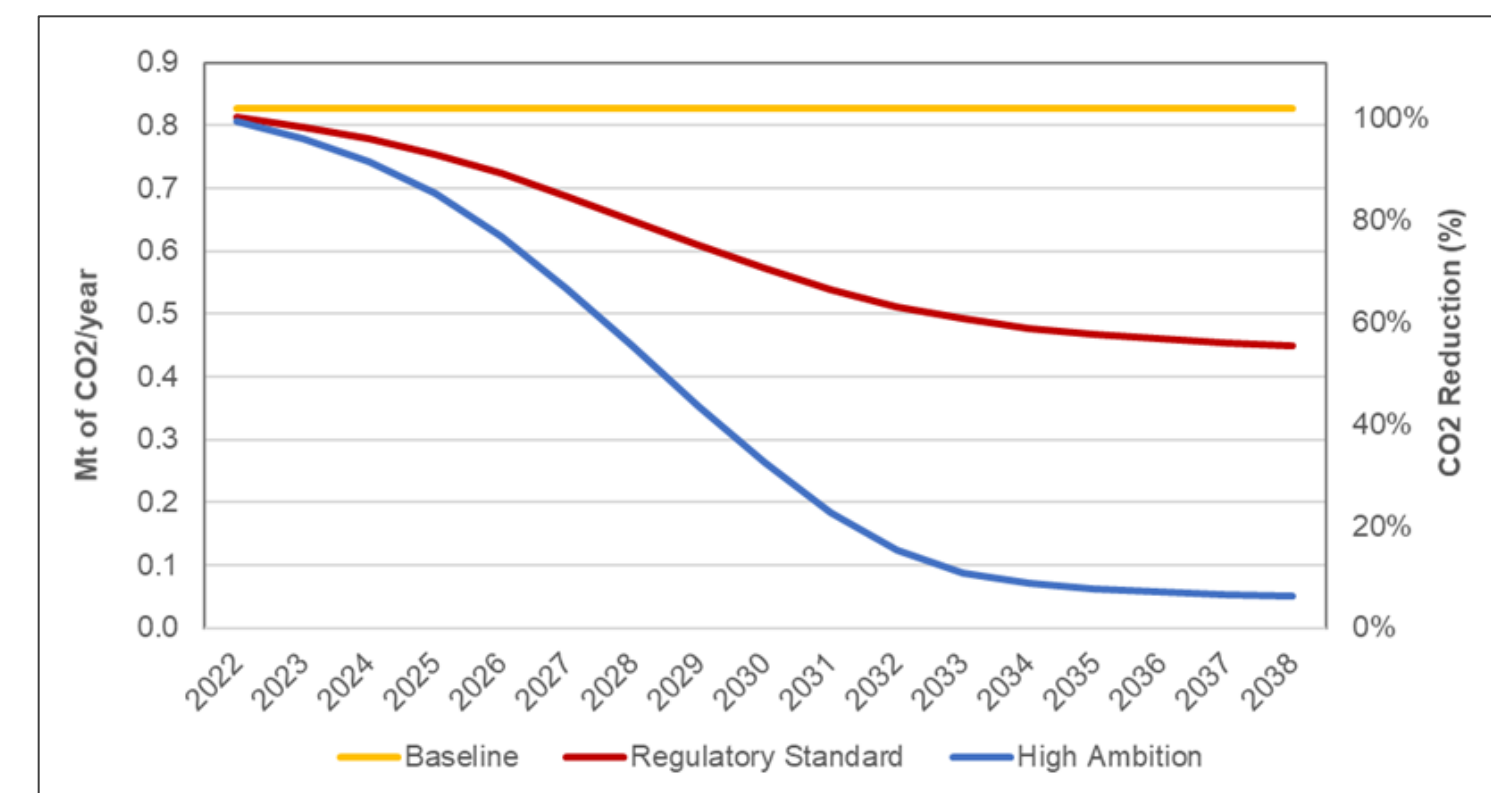

Stage 2

Explore scenarios

Retrofit report

- Mapped pathways to timeframes using retrofit adoption curve and prioritisation logic.
- Phase retrofit works over the time required to achieve targets (eg 2022 to 2038).
- Estimate annual cost and savings to visualise scale of challenge.
- Summarised findings in a report to each council.

Stage 3

Create a plan

Retrofit pipeline scoping

- Develop 'hitlist' of relevant project areas that align with council priorities:
 - energy efficiency targets
 - decarbonisation
 - fuel poverty
- Signpost to public and private funding.
- Provide short-term steer for funding and demonstrators.

Stage 3

Create a plan

Interventions

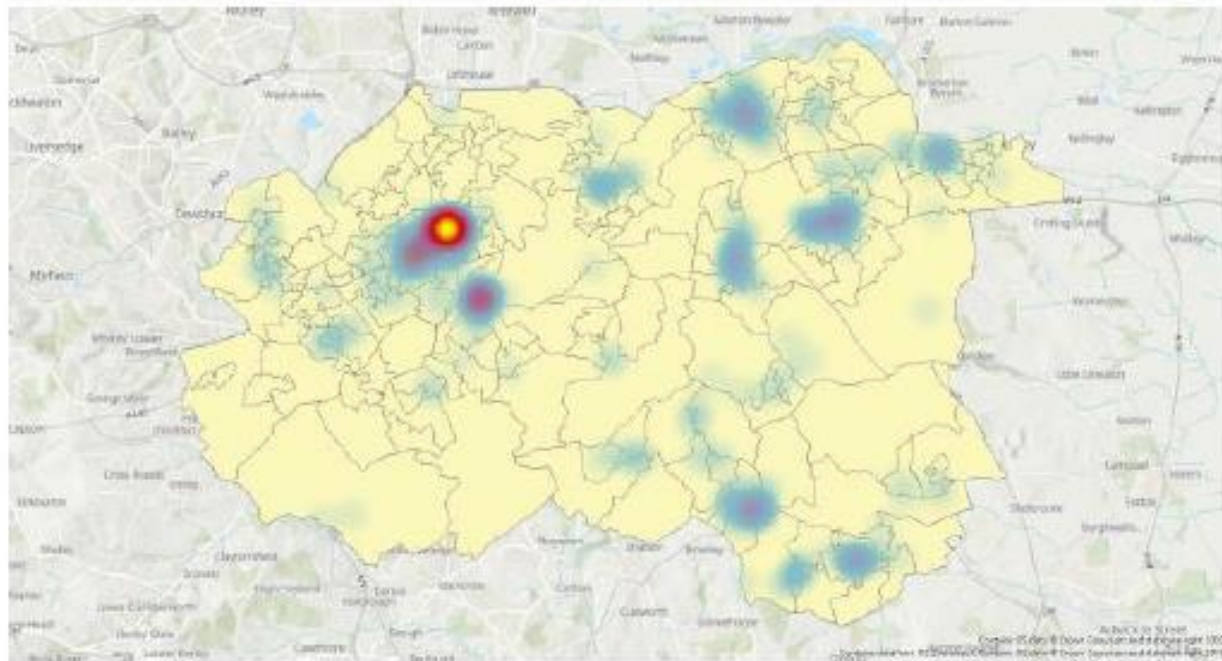

1. Area based scheme anchored around social housing
2. No/low regret heat pump installation
3. Private rented sector compliance (MEES)
4. Large inefficient owner-occupied homes
5. Off-gas homes in fuel poverty
6. Quick wins/low hanging fruit
7. Worst-first homes

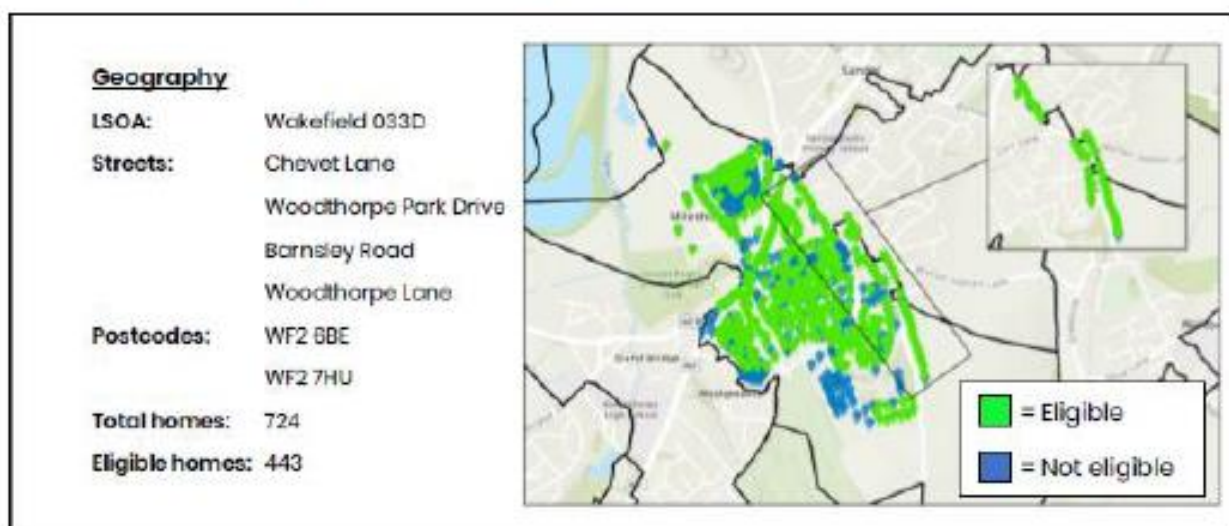

Stage 3

Create a plan

1. Identify hotspots by intervention

2. Identify priority areas (LSOAs)

3. Review key attributes of stock

4. Summarise costs/savings

Retrofit Information	High Ambition	Regulatory Standards
1. Total retrofit cost	£23,584,702	£15,445,684
2. Average cost per home	£53,239	£34,886
3. Average measures per home	8.2	4.7
4. Fuel bill reduction (%)	56.40%	36.92%
5. Carbon emissions reduction (%)	99.80%	43.40%
6. Average SAP improvement	24.3	16.3
7. Average SAP Score Potential	80.0	72.0
8. Homes alleviated out of fuel poverty	105	104

5. Review public/private funding

Impact

Timeline

- 2022 – initial modelling work completed
- 2023 – exercise replicated in Leeds and Kirklees to complete dataset for WYCA
- 2024 – development of WYCA’s regional retrofit programme – Better Homes Hub
 - strategic advisory role
 - develop 10-year delivery plan
 - design One Stop Shop for retrofit
